AREVON.

California

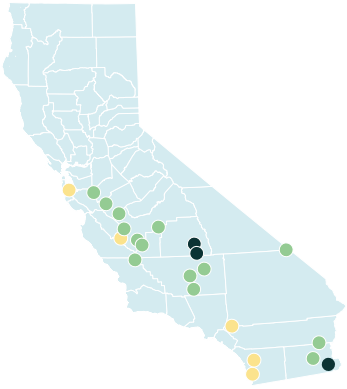

Powering America. Strengthening Communities.

State Overview

Arevon is actively expanding its portfolio in the Western region of the United States and is focused on bringing more energy and economic benefits to California.

Our projects in California are designed to deliver affordable, reliable power while creating local jobs and strengthening communities. By partnering with landowners, local governments, and other area stakeholders, Arevon ensures that each project aligns with regional priorities and reflects the values of the communities it serves.

Technology

- Solar
- Energy Storage
- Solar-plus-Storage

4,000+ MW
In Operation

250 MW
Under Construction

Our Impact in California

Estimated economic and environmental benefits[1]

$320+ Million
Property Tax Payments[2]
Boosting local economies

3,900+
Construction Jobs
Supporting competitive wages and local hiring

82+ Billion Gallons
Water Saved Annually
Conserving vital resources

3.4+ Million Metric Tons
CO_2 Emissions Avoided Annually
Improving public health

Powering Communities
across the state

920,000+
Homes Can Be Powered Annually by Solar Capacity
Delivering American-made energy

1.8+ Million
Homes Can Be Powered by Battery Storage During Peak Demand
Supplying critical energy when needed most

[2]Estimated cumulative payments over the life of Arevon's construction and operational projects in California.

Prioritizing Safety

Safety is Arevon's top priority at every solar and energy storage project we develop, construct, own, and operate. Arevon upholds the highest safety standards, provides ongoing training, and fosters a culture of vigilance — ensuring the well-being of our staff, contractors, and host communities.

Strengthening Communities

At Arevon, we don't just develop energy projects — we show up, we listen, and we act as responsible partners to the communities that make them possible. That means more than delivering electricity. It means supporting local priorities through volunteering, event sponsorships, and direct community investments. As part of our long-term commitment, Arevon allocates a portion of each project's capital cost to community benefits. To date, we have contributed more than $8 million in charitable giving in our project areas, supporting each community's unique goals and values.

Respecting Land

Our projects utilize the land responsibly to provide a reliable source of domestic energy, while preserving it for future options such as farming and preventing more permanent and intensive development. As a long-term owner and operator, Arevon is committed to respecting, safeguarding, and maintaining the land that supports our homegrown energy projects.

California Industry Highlights[3]

56.5 GW
Solar Installed

62 GWh
Energy Storage Installed

16.4+ Million
California Homes Can Be Powered by Solar

39.1%
Electricity From Solar

78,900+
Solar Jobs

About Arevon

Arevon is a U.S. energy leader committed to powering America with affordable, reliable, and secure homegrown energy. Headquartered in Arizona, and with a regional office in New York, the company's experienced and dedicated team develops, finances, builds, owns, and operates renewable energy projects nationwide. With a strong track record in utility-scale solar and energy storage, Arevon is a trusted partner to utilities and businesses seeking cost-effective, sustainable energy solutions. By prioritizing American manufacturing and domestic energy production, the company invests in U.S. jobs, strengthens local economies, and advances the country's energy independence.
